

Why should I choose the Supra Wireless Information Network?

Never "update" your Key again! Since your key is wireless, it checks in with the server to ensure it's authorized to continue accessing homes in the area. You don't need to call in or take the key inside to update, because now it updates itself. Just leave it in your car and forget about it. No other key can provide this technology or convenience.

Be safe out there! Coming in 2008, the Supra ActiveKEY includes a safety alert feature at no additional charge. With the push of a button, send a message to your emergency contact list including your last known Supra KeyBox address.

Know who is in your listings...as soon as they open the door! Only the Supra Wireless Information Network can provide real-time showing notification. Now, all keys communicate wirelessly, providing information and limiting showings without appointments or "previewing." Fast and complete information results in quicker sales and peace of mind for your seller. In today's market isn't that what it's all about?

Would you like an email or text message when your listings are shown? Exclusively with GE Security, showing activity is automatically delivered via email (to whomever the listing agent selects); within the MLS; web access; toll-free phone number or directly to the listing agent's (or team's) key.

Follow up on the showings with an automatic feedback request (buyers' agents opt-in) or forward customizable showing reports to your seller. Only from GE Security!

Also, in an emergency and only with GE Security, all KeyBox accesses can be displayed at this listing with no other hardware needed (agent, office, phone, date & time of access).

This will save you time by not having to drive to listings to pick up cards (vacant houses) and increase seller confidence by being able to provide them with a feedback and reports from those who actually showed the house.

Have you ever left your lockbox key at home? Now you won't have to carry a key again! That's right! Any one of 35 compatible Palms and SmartPhones can be your lockbox key. Do you have a Treo Centro, 650 or 700? It works! Plus, WindowsMobile 5.0 or higher Smartphones are compatible as well.

Why settle for a USB system, when wireless is available today?

I just want to get in the house! We've improved the basic key to make it easier to use! An easier to read display (backlit for night time showings) tells you someone is showing your listings right on your key. Bigger buttons and a flashlight that lights those dark homes make your life easier. Show in cold weather? Program your key in your car. Open the box in under 5 seconds when you get to the house. No other system is faster!

Need help? At GE Security, we work the same hours you do...a lot! Including nights and weekends! Only GE Security has toll-free agent support available from 5:00 a.m. to 7 p.m. PT, seven days a week. If you have questions, you need answers and it's not during "normal" business hours.

It's secure and reliable! If you only show properties in the sunshine and daylight, this probably isn't important to you. But, if you live in a cold climate, you know a lockbox has to be reliable in all types of weather! The Supra iBox from GE Security is the only system that is completely sealed to make it 99.5% reliable.

With over 6,000,000 electronic lockboxes in use over 15 years, it's proven! We'll put our money where our mouth is and warrant all of the Supra products at no additional charge.

Only the Supra iBox is certified by Underwriter's Laboratory. Your seller has the comfort of knowing you are providing them with the highest level of security available on the market today to store the keys to their home.

Are you concerned about replacing batteries in all of your KeyBoxes? We have good news! The Supra iBox battery is warranted for the term of the agreement, so you will never need to change batteries or worry about a dead box at a listing. The battery life is displayed every time the shackle is released. If you have a low battery, we'll just replace your entire KeyBox.

No loss of data is possible, because replaceable batteries create this security breach. In addition, replaceable batteries allow for tampering (i.e. renters, children, or unsavory characters).

Code! Code! Code! Who's got the (correct) code? You've come to rely on quick, easy, and secure access. If you've ever heard a seller say, "I know someone's been here, but..." you don't have to worry with the Supra system. Access is authorized, first by the Association and then by you!

Don't compromise the integrity of a secure lockbox system by permitting the use of a non-controllable combination to access the lockbox. It doesn't matter whether it's a daily or contractor combination. It's unsecured and unmonitored, negating the value of the electronic system.

Does your office want to manage multiple codes for listings? Do you want to keep track of different codes? Have you ever reversed the lockbox combo numbers? How can you be sure that once you give the code to someone they won't give it to someone else? Or use it again?
